

Lois constitutives des composants

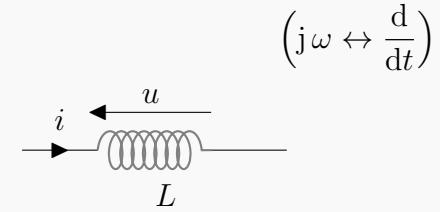

$$u = R i \Leftrightarrow \underline{Z} = R$$

Résistance

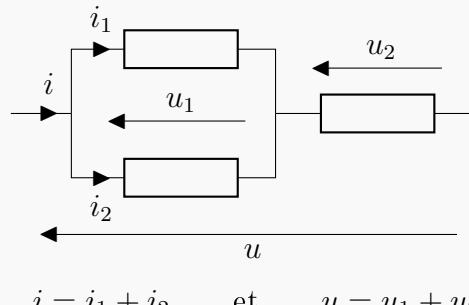

$$i = C \frac{du}{dt} \Leftrightarrow \underline{Z} = \frac{1}{j C \omega}$$

Condensateur

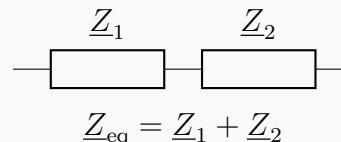

$$u = L \frac{di}{dt} \Leftrightarrow \underline{Z} = j L \omega$$

Bobine

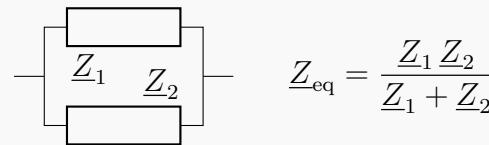

Formules élémentaires

$$i = i_1 + i_2 \quad \text{et} \quad u = u_1 + u_2$$

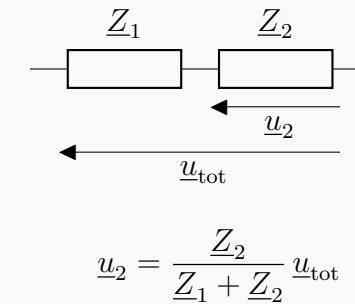

Lois des noeuds et des mailles

$$\underline{Z}_{\text{eq}} = \underline{Z}_1 + \underline{Z}_2$$

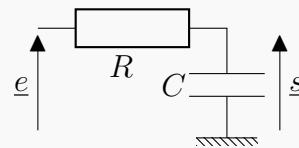

$$\underline{Z}_{\text{eq}} = \frac{\underline{Z}_1 \underline{Z}_2}{\underline{Z}_1 + \underline{Z}_2}$$

$$\underline{u}_2 = \frac{\underline{Z}_2}{\underline{Z}_1 + \underline{Z}_2} \underline{u}_{\text{tot}}$$

Pont diviseur de tension

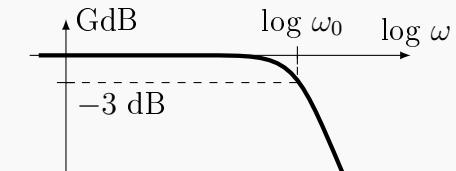

Filtres (exemple du passe-bas du premier ordre)

$$\underline{\mathcal{H}} \equiv \frac{s}{e} = \frac{1}{1 + j R C \omega} \quad \omega_0 = \frac{1}{R C}$$

$$\text{GdB} \equiv 20 \log |\underline{\mathcal{H}}| = -10 \log \left( 1 + \frac{\omega^2}{\omega_0^2} \right); \quad \varphi \equiv \arg \underline{\mathcal{H}} = -\arctan (\omega / \omega_0)$$

$$\text{GdB} \xrightarrow[\omega \rightarrow 0]{} 0; \quad \text{GdB} \xrightarrow[\omega \rightarrow \infty]{} -20 \log \omega$$

$$\varphi \xrightarrow[\omega \rightarrow 0]{} 0; \quad \varphi \xrightarrow[\omega \rightarrow \infty]{} -\pi / 2$$

Aspects énergétiques

$$\mathcal{P} = u i$$

$$\text{exemple du condensateur : } \mathcal{P} = C u \frac{du}{dt} = \frac{d}{dt} \left( \frac{1}{2} C u^2 \right) \quad \text{on identifie } \mathcal{E} = \frac{1}{2} C u^2.$$
